

Rural Wireless Broadband Access

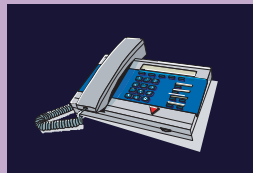

WLL Base Station

Its function is to link remote terminals to the PSTN. The link between the WLL base station and the remote terminals is established by a wireless radio channel. A point to multipoint scheme is employed to link the WLL base station.

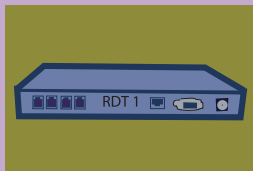

WLL Fixed Terminal

A device which links between WLL base station and remote terminals such as an IP Phone, PC via a wireless radio channel.

IP Phone

The telephone system that uses the VoIP as connection standard and sends the data by using the TCP/IP protocol.

VoIP Gateway

VoIP gateway is a gateway that allows VoIP terminals to communicate with non-VoIP terminals by converting protocols. A VoIP gateway is the point at which a circuit-switched call is encoded and repackaged into IP packets.
